

BEFORE YOU BEGIN:

PLEASE READ THROUGH THE INSTRUCTIONS AND INSPECT THE KIT BEFORE YOU GET STARTED.

Tools: You may need basic hobby tools such as a hobby knife, files, and sandpaper as well as glue to complete the assembly process.

Glue: We recommend using both superglue and PVA (white glue). Super glue is necessary for gluing any plastic, acrylic, or resin parts and sets very quickly. PVA gives you more working time if you need it for larger areas or for parts that need extra finesse to get lined up perfectly.

Cleaning Parts: The sprue points where parts were attached to the sheets can be sanded flush or carefully saved with a hobby knife. We do not recommend scaping as you would with plastic or resin models as it tends to make the MDF fray and get fuzzy. Part cleaning with a hobby knife is easiest if done before assembly, but can frequently be done after if you have files and sandpaper on hand. Where possible, we try to place sprue points in our designs to be in hidden places to avoid the need for cleaning on many parts.

Priming: We highly recommend priming with a FLAT enamel spray paint. Rustoleum and Krylon make these types of paint and are what we use in the studio.

Painting: Paint with your normal hobby and spray paints to finish your project.

Thank you so much for your purchase and please reach out if you have any questions or run into any issues.

1

Gather these parts.

2

Glue side walls slotted into the roof plate as shown.

3

Glue the ceiling plate slotted into the sides below the roof as shown.

4

Glue top front panel on as shown.

5

Glue the construct to the base plate and the bar front in place as shown.

6

Gather these parts.

7

Glue the back plate on.

8

Glue hook rails in on both sides of the back plate.

9

Glue the window rim and door frame.

10

Glue down bar top.

11

Glue in the two crown molding slats (larger slat on top) into the slots on the top front.

12

When glued in, you should have a hole like this on both corners to accept acrylic rail signs.

13

Gather these parts.

14

Flip the building over. Glue in 3 joist rails along the ceiling.

15

Glue the joist end caps into the remaining holes as shown.

16

Gather these parts for the stools.

17

Glue the stands into the slots along the front of the bar.

18

Glue the seats on top of each of the stands.
